

Workshop

Metrological Characterization of Microvesicles

28 May 2015

Delft, The Netherlands

Metrology for healthcare

Measuring biological nanoparticles is a true challenge. The goal of this workshop is to show how metrology has improved the detection and characterization of extracellular vesicles in clinical samples, through standardization of sample preparation and comparison of measurement techniques.

Target audience

Metrologists, physicists, biologists, healthcare scientists, clinicians

Program

- Lectures from experts in metrology and extracellular vesicles
- Live demonstrations
- Forum discussions
- Networking opportunities

Venue

VSL, Thijsseweg 11, Delft, The Netherlands www.vsl.nl/en/route-description

Registration

To register for this workshop, please send an e-mail to r.nieuwland@metves.eu stating your name and affiliations. Participation is free of charge.

Organization

Academic Medical Centre (AMC) and the national metrology institutes of the Netherlands (VSL), Germany (PTB), Belgium (SMD), and Switzerland (METAS)
